Treatment of Drug-Susceptible Tuberculosis
Writing Committee Leadership
and GRADE Methodology Group

• **Chairs:** Susan Dorman (IDSA), GB Migliori (ERS),
  Andrew Vernon (CDC), Payam Nahid (ATS)

• **GRADE Methodology Group:** Narges Alipanah, Jan
  Brozek, Adithya Cattamanchi, Leila Chaissone, Richard
  Menzies, Payam Nahid, Giovanni Sotgiu

Disclosures

• N. Alipanah, J. Brozek, A. Cattamanchi, L. Chaissone, S. Dorman, M.
  Grzemska, J. Higashi, C. Ho, P. Hopewell, S. Keshavjee, C. Lienhardt, C.
  Raftery, G. Sotgiu, J. Saukkonen, and S. Schaaf reported that they had no
  relevant commercial interests.

• P. Barry relative previously owned stocks or options of Merck.

• R. Chaissone consultant and ownership of stocks or options for Merck.

• C. Daley received research support from Insmed and served on data and
  safety monitoring boards of Otsuka America Pharmaceutical and Sanofi
  Pasteur.

• C. Peloquin received research support from Jacobus Pharmaceuticals.

• J. Starke reported service on a data safety and monitoring board of Otsuka
  Pharmaceuticals.

• A. Vernon reported serving as the chief of a US Centers for Disease Control
  and Prevention clinical research branch doing clinical trials in tuberculosis.
  Collaborates with pharmaceutical companies, that may provide support
  such as drug supplies or laboratory funding for pharmacokinetic studies.

Treatment of Drug-Susceptible Tuberculosis
Guideline Contents

1. ORGANIZATION AND SUPERVISION OF
   TREATMENT
   — PATIENT-CENTERED CARE AND CASE MANAGEMENT
   — ENSURING ADHERENCE AND TREATMENT SUCCESS

2. RECOMMENDED TREATMENT REGIMENS
   — DECIDING TO INITIATE TREATMENT
   — PREFERRED REGIMENS
   — ALTERNATIVE REGIMENS
   — PATIENTS AT INCREASED RISK OF RELAPSE
   — INTERRUPTIONS IN THERAPY

2016 ATS/CDC/IDSA TB Treatment Guidelines
Nahid et al. CID 2016
Treatment of Drug-Susceptible Tuberculosis
Guideline Contents

3. TREATMENT IN SPECIAL SITUATIONS
   - HIV infection
   - Children
   - Pregnancy and breastfeeding
   - Renal disease
   - Hepatic disease
   - Anti-TNF drugs
   - Diabetes
   - Advanced age
   - Lymph node tuberculosis
   - Bone, joint and spinal tuberculosis
   - Pericardial tuberculosis
   - Pleural tuberculosis
   - Tuberculous meningitis
   - Disseminated tuberculosis
   - Genitourinary tuberculosis
   - Abdominal tuberculosis
   - Culture-negative pulmonary tuberculosis

4. PRACTICAL ASPECTS OF TREATMENT
   - Management of common adverse effects
   - Drug-drug interactions
   - Therapeutic drug monitoring

4. RECURRENT TUBERCULOSIS, TREATMENT FAILURE, AND DRUG RESISTANCE
   - Recurrent tuberculosis
   - Poor treatment response and treatment failure, including brief overview of drug resistance.

6. RESEARCH AGENDA FOR TUBERCULOSIS TREATMENT
   - New antituberculosis drugs and regimens
   - Biomarkers of treatment effect and individualization of therapy
   - Treatment of tuberculosis in special situations
   - Implementation research
GRADE METHODOLOGY (Grading of Recommendations Assessment, Development, and Evaluation)

Recommendations based on the certainty in the evidence assessed according to the GRADE methodology, incorporating patient values and costs as well as judgments about tradeoffs between benefits and harms.

Table 1: Interpretation of “Strong” and “Conditional” Grading of Recommendations: Assessment, Development, and Evaluation-Based Recommendations

Nine PICO(s) addressed:

1. Should case management be provided to patients receiving curative tuberculosis therapy to improve outcomes?
   *Case management: patient education/counseling, field/home visits, integration/coordination of care with specialists and medical home, patient reminders, incentives/enablers.

   Recommendation 1: We suggest using case management interventions during treatment of patients with tuberculosis. (Conditional recommendation/low quality of evidence)
2. Does self administration (SAT) of medications have similar outcomes compared to directly observed therapy (DOT) in patients with tuberculosis?

**Recommendation 2:** We suggest using DOT rather than SAT for routine treatment of patients with all forms of tuberculosis. (Conditional recommendation/low quality of evidence)

3. Should tuberculosis medications be dosed daily or intermittently in the intensive phase of treatment?

**Recommendation 3a:** We recommend the use of daily rather than intermittent dosing in the intensive phase of therapy for drug-susceptible pulmonary tuberculosis (Strong recommendation / Moderate quality evidence).

4. Should tuberculosis medications be dosed daily or intermittently in the continuation phase of treatment?

**Recommendation 4a:** We recommend the use of daily or three times weekly dosing in the continuation phase of therapy for drug-susceptible pulmonary tuberculosis (Strong recommendation / Moderate quality evidence).
5. Does initiation of anti-retroviral therapy during tuberculosis treatment compared to at the end of tuberculosis treatment improve outcomes among tuberculosis patients co-infected with HIV?

Recommendation 6: We recommend initiating antiretroviral therapy during tuberculosis treatment.

Within the first 2 weeks of tuberculosis treatment for patients with CD4 cell counts <50/mm³
By 8-12 weeks of tuberculosis treatment initiation for patients with CD4 cell counts ≥50/mm³
(Strong recommendation / High quality of evidence).

*Note: an exception is patients with HIV infection and tuberculous meningitis

2016 ATS/CDC/IDSA TB Treatment Guidelines

6. Does extending treatment beyond 6 months improve outcomes compared to the standard 6-month regimen among tuberculosis patients co-infected with HIV?

Recommendation 5a: For HIV-infected patients receiving antiretroviral therapy, we suggest using the standard 6-month daily regimen.

Recommendation 5b: In uncommon situations in which HIV-infected patients do NOT receive antiretroviral therapy during tuberculosis treatment, we suggest extending the continuation phase to 7 months in duration, corresponding to a total of 9 months of therapy (Conditional recommendation / Very low quality of evidence).

2016 ATS/CDC/IDSA TB Treatment Guidelines
7. Does the use of adjuvant corticosteroids in tuberculous pericarditis provide mortality and morbidity benefits?

**Recommendation 7:** We suggest initial adjunctive corticosteroid therapy not be routinely used in patients with tuberculous pericarditis (Conditional recommendation / Very low quality of evidence).

---

8. Does the use of adjuvant corticosteroids in tuberculous meningitis provide mortality and morbidity benefits?

**Recommendation 8:** We recommend initial adjunctive corticosteroid therapy with dexamethasone or prednisolone given for six weeks for patients with tuberculous meningitis (Strong recommendation / Moderate quality of evidence).

---

9. Among HIV-negative patients (adults and children) with paucibacillary TB (i.e., smear negative, culture negative), does a shorter duration of treatment have similar outcomes compared to the standard 6-month treatment duration?

**Recommendation 9:** We suggest that a 4-month treatment regimen is adequate for treatment of HIV-negative adult patients with AFB smear- and culture-negative pulmonary tuberculosis (Conditional recommendation / Very low quality of evidence).
2016 ATS/CDC/IDSA TB Guidelines
Select Changes/Updates from 2003 edition

- Early initiation of ART in HIV/TB patients
- Duration of TB treatment in HIV w/o ART extended
- Evidence base for intermittent therapy reviewed
  — Once weekly regimen NOT recommended
- Evidence base for case management (patient education, incentives, enablers, DOT) reviewed
- TB treatment in pregnancy, language updated for PZA
- Steroids not routinely recommended for TB pericarditis

Thank you

- Strong commitment and leadership from ATS/CDC/ERS/IDSA
- ATS Documents Editor Kevin Wilson and GRADE Methodologist Jan Brozek
- Reviewers: ATS, IDSA, CDC, NTCA, ERS, ACET (>350 reviewer comments)
- Community Research Advisors Group of the CDC-TBTC and Treatment Action Group
