

OBJECTIVES

Upon completion of this training, participants will be able to:

- 1) describe the TB Class B designations (B1-B3) and demonstrate understanding of the different types of follow-up required in the U.S. for patients with each classification type in order to improve outcomes for patients.
- 2) apply the National TB Indicators Project (NTIP) 2025 objectives related to immigrants and refugees with abnormal overseas chest x-rays to individual TB Class B referrals to encourage efficient screening processes and utilization of short course latent tuberculosis infection (LTBI) treatment options.
